

DAVID OATES
Midcontinent Independent System Operator

David Luke ("DL") Oates leads the markets and grid research group for the Midcontinent Independent System Operator (MISO). DL's team drives innovation by prototyping systems and processes that enable new capabilities across MISO's markets, operations, planning, and technology functions. This work contributes to sustaining reliability and increasing value for MISO's customers. DL has held electric power-focused positions in academia, consulting, and technology. At REsurety, DL established and led the power markets research team, focusing on building, testing and deploying fundamentals and statistical models of power markets to support customer workflows. With the Brattle Group, DL supported electricity market operators, utilities, and asset owners to address market design, asset valuation, and regulatory questions. DL holds a bachelor's degree in engineering physics from Queen's University, Canada and a Ph.D. in engineering and public policy from Carnegie Mellon University.
